ABOUT ME

I am a Bachelor of Informatics Engineering graduate from Telkom University with hands-on experience in desktop software development, web backend development, and data analysis. Highly motivated, disciplined, and responsible, with strong problem-solving skills and a proactive, fast-learning mindset. Able to work effectively both independently and in team environments, with strong communication and collaboration skills. Passionate about continuous learning, particularly in machine learning and game development, currently explored through independent study and practical projects.

EDUCATION

Telkom University – Bachelor of Informatics Engineering	2022 – 2026
GPA: 3.96 / 4.00	

WORK EXPERIENCE

- **Internship – IT Engineering, CV Mitra Garuda Perkasa** 2025
Improved sales data processing for a building materials distribution company that relied on Microsoft Excel without visualization. Proposed and developed an offline Python-based desktop application with an interactive dashboard while maintaining compatibility with existing Excel templates and business constraints. Independently handled the full development lifecycle within one month, from requirement analysis to testing. Delivered the solution with iterative revisions, resulting in positive client satisfaction.
- **Project – Full Stack Developer, Sasa Catering** 2025
Contributed as a full stack developer in developing a sales dashboard application to improve data management and accuracy. Proposed and implemented a solution inspired by previous experience, enabling data visualization, as well as data input and Excel import/export functionality. Addressed issues with manual record-keeping that led to inconsistencies and errors, resulting in improved data organization and reduced recording errors.
- **Internship – Researcher, Center of Excellence Healthcare & Wellbeing Technology** 2025
Telkom University
Conducted machine learning research focusing on concept drift in data streams using adaptive approaches. Initiated a novel research topic within the Center of Excellence and completed the full research lifecycle independently, including data collection, modeling, evaluation, and academic writing. Successfully produced a Q2-indexed journal publication.

WORK EXPERIENCE

- Project – Project Manager & Full Stack Developer, State Senior High School 1 Purbalingga 2025
Led the development of a website for extracurricular introduction and registration. Managed a team of six while contributing as a full stack developer, taking ownership of both frontend and backend development to ensure alignment with design and functional requirements. Delivered the project within one month with minimal revisions, achieving client satisfaction. The system is ready for deployment and will be integrated with the school's existing infrastructure.
- Internship – Practicum Assistant, Informatics Laboratory Telkom University 2024 – 2025
Assisted lecturers in delivering practicum courses by teaching, guiding, and evaluating students. Led three classes across two semesters, including Data Structures (C++) and Object-Oriented Programming (Java). Developed strong communication, mentoring, and classroom management skills.

PUBLICATIONS

- “Utilization of Adaptive Machine Learning for Streaming Sentiment Analysis: The Effects of Batch and Drift Types” – ETASR, Q2 Indexed Journal, 2026
- “An Adaptive Random Forest for Data Stream Sentiment Classification under Concept Drift” – JADS, Q3 Indexed Journal 2026

CERTIFICATIONS & TRAINING

- AWS Academy Cloud Foundations 2024
Completed a 20-hour training program on cloud computing fundamentals, including AWS services and core cloud architecture. Certificate of Completion awarded.

TECHNICAL SKILLS

Skills:

- Problem Solving
- Analytical Thinking
- Team Collaboration & Communication
- Leadership & Project Management
- Backend Development
- Data Analysis

Tools:

- Git and GitHub
- Visual Studio Code
- Figma

Programming Languages:

- Python
- Java
- C++
- C#
- PHP
- JavaScript
- Golang
- SQL (MySQL)
- HTML and CSS
